

Simplified working

Music Engine simplifies playing music, providing greater flexibility than standard CD or MP3 players, and taking up far less time to operate. Easy to use, the system is operated via a PC or optional touch-screen interface.

Muisc Library

With over 50,000 preloaded tracks, monthly updates of the latest music, the option to upload or play CD's, and specific music available on request, all tastes are well catered for. Playlists can quickly and easily be created, and set to start playing automatically.

A legal solution

Music Engine is licensed through the IFPI. Separate site-specific PRS and PPL licenses are required.

Range of outputs

The system can play through an existing audio system, or optionally a professional sound system can be installed. Optionally, the system can also control an image-display screen.

Features

- Simple user interface
- Quick and intelligent search
- Over 50,000 tracks preloaded
- Monthly updates of the latest music
- CD play out
- CD/MP3 upload available by request
- Specific music available by request
- Customisable playlists
- Automatic timed playlists
- Easily connects to existing audio system
- Training provided at installation
- 24hr response time for system failures
- Music licensing by IFPI

Optional Extras

- Image play out screen
- Up to five individually controlled zones
